

# Build-your-own APS Haul Truck Instructions

The APS Haul Truck is a great model for you to build with your children. Please allow approximately 2.5 to 3 hours to build.

## Build-time Breakdown

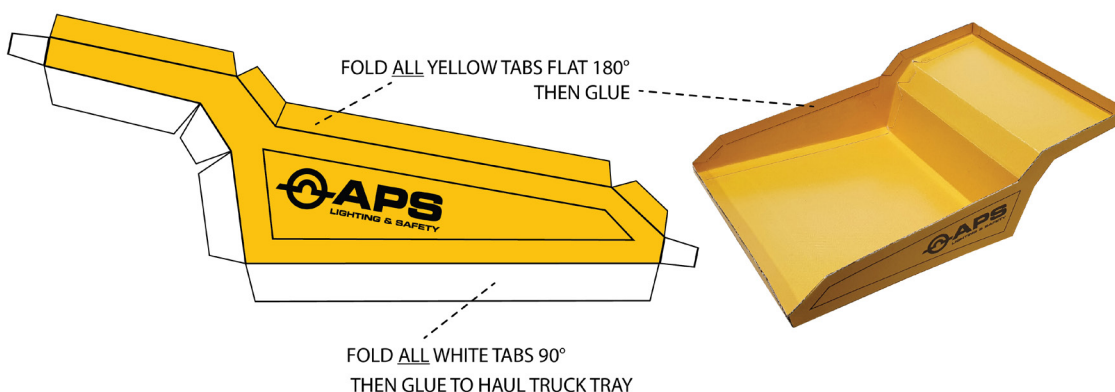

- Cutting pieces: 40 minutes
- Pre-folding / folding pieces: 40 minutes
- Gluing pieces: 1 hour and 20 minutes

## Recommendations

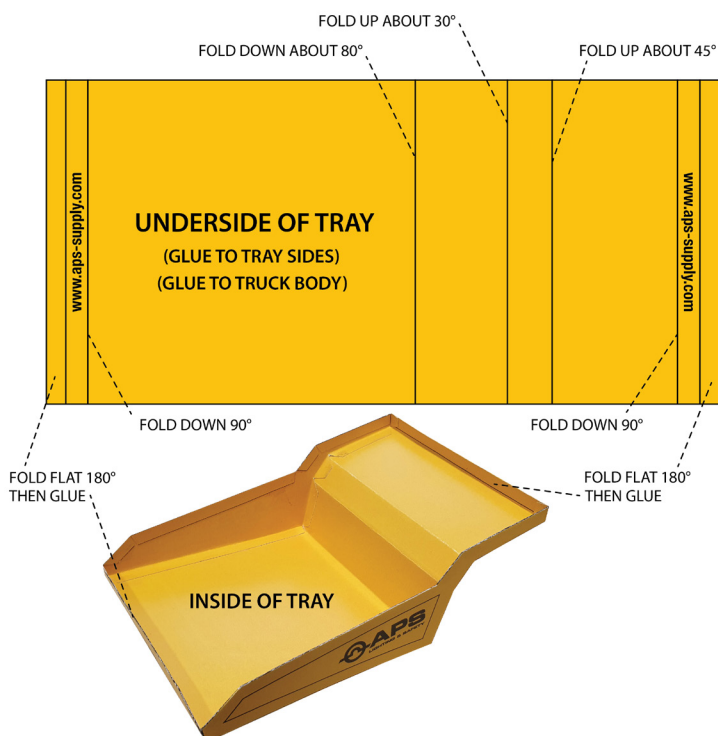

- Suitable for ages 8 and up.
- Parental supervision recommended.
- Please monitor your children when working with craft tools such as scissors.
- Use a craft glue such as a quality glue stick for gluing all the tabs, wheels and other components
- Do not use dangerous glues such as super glue.

## Hints & Tips

- Carefully cut around the edges of all the pieces. Accurate cutting means a more professional finish.
- Pre-fold all the dotted lines with a ballpoint pen and ruler. First, hold pieces up to the light to see a bend line. Draw a small mark on each end (i.e. opposite side that is not seen). Place piece on cutting board and use a ballpoint pen and ruler to redraw the bend line. This creates a pre-fold making it easier, quicker and a lot more accurate to fold on the bend line.
- Use your glue stick to glue both contact areas first, wait 20 or so seconds, and then firmly press together. Move or slide piece into position for perfection. After a few minutes, firmly apply pressure for a second time to ensure a strong bond.
- When attaching wheels, ensure that the four wheels sit perfectly flat on a hard surface such as a table.
